

NexusDesk

AI Workbench for Code, Data & Ops

BRAND SYSTEM / STARTER KIT

A premium, connected identity for a local-first AI workbench.

Docker

NexusDesk brand essence

NexusDesk is a local-first AI workbench that connects code, files, documents, spreadsheets, marketing traffic, databases, Docker environments, and generated artifacts inside one desktop workspace.

POSITIONING

An AI workspace for people who need to analyze, build, explain, and ship across technical and business data.

PERSONALITY

Intelligent, precise, connected, trustworthy, modern, and quietly powerful.

VISUAL IDEA

A luminous orbital nexus around a simplified N: one center, many connected workflows.

Brand promise

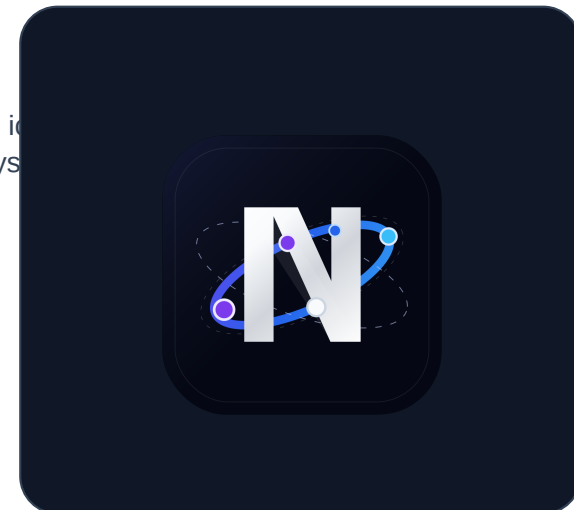

NexusDesk turns scattered workspaces into one connected command center: ask questions, inspect assets, create reports, generate charts, and move from insight to action.

Primary mark, wordmark, and app icon

SYMBOL

Use the orbital N symbol for compact areas: app icon, sidebar, favicon, launcher, splash screen, and system tray.

CLEARSPACE

Keep clearspace at least the height of the vertical 'N' to avoid crowding the orbit or dots.

Palette and usage

The palette keeps the product technical and premium: deep indigo for trust and focus, violet for intelligence, blue for action, and sky blue for clarity.

Deep Indigo

#0B0F1F

Core dark UI, hero backgrounds

Nexus Violet

#7C3AED

AI/intelligence accent

Electric Blue

#2563EB

Primary actions and links

Sky Blue

#38BDF8

Charts, highlights, status

Silver

#D1D5DB

Neutral strokes, disabled UI

Pure White

#FFFFFF

Text on dark, clean surfaces

Dark-first UI

Use dark surfaces for command-center views, Docker/Ops panels, logs, and agent activity.

Light analysis surfaces

Use light surfaces for documents, reports, spreadsheet previews, and business dashboards.

Inter + precise interface rhythm

Health

DENSE BUT READABLE

Panels may contain complex data, but spacing and hierarchy must keep actions clear.

VISIBLE AGENT ACTIONS

Tool calls, file writes, database queries, and Docker actions should be visible and confirmable.

ARTIFACT-FIRST

Reports, charts, code files, dashboards, and exports are first-class outputs, not hidden chat text.

One identity across many workflows

AI

LLM chat, agents, tool approvals, memory, generated artifacts.

Code

Files, directories, syntax highlighting, code review, safe diffs.

Data

Excel, CSV, DuckDB, SQL, charts, exported reports.

Documents

PDF, DOCX, PPTX, summaries, citations, generated reports.

Marketing

Traffic, campaigns, GA4/Search Console exports, landing-page analysis.

Ops

Docker, Docker Desktop, containers, logs, Compose, infrastructure notes.

Product design note

The logo's orbit and nodes represent NexusDesk's core model: one workspace connected to many file types, data sources, developer tools, and business workflows.

Use with contrast and restraint

DO

Use the full-color mark on deep indigo or dark UI surfaces.

DO

Use the light-background version for white reports and documentation.

AVOID

- Do not stretch or skew the symbol.
- Do not recolor with random gradients.
- Do not remove the orbital connection motif from the symbol.
- Do not rotate the wordmark.
- Do not place on busy photos without a dark overlay.
- Do not use low-contrast combinations.

Included production assets

This ZIP contains a starter production kit with editable SVGs, PNG exports, app icons, favicons, design tokens, and the selected concept reference.

SVG

Primary horizontal logos, stacked logos, wordmarks, orbital symbols, app icon, monochrome variants.

PNG

Transparent logo exports, dark/light panel logos, symbol exports, app-icon sizes, favicon sizes.

Tokens

JSON and CSS variables for colors, gradients, typography, and radius values.

Source

Selected option 3 generated branding board as the visual concept reference.

Before public launch

Run a trademark check, check domain/app-store availability, and optionally have a designer outline the SVG wordmark text in Figma or Illustrator for final locked production files.

Option 3 visual direction
